Descriptions

The RTXM228-851 850nm optical Transceiver supports high speed serial links over multimode optical fiber at signaling rates for use in Fiber Channel link up to 8.5Gb/s data rate, as well as related applications. The Transceiver is compliant with FC-P1-4, SFF-8431 and SFF-8432 for electrical and mechanical specifications. The transmitter converts serial CML electrical data into serial optical data. An open collector compatible Transmit Disable (Tx_Dis) is provided. When TX_DIS is asserted High, Transmitter is turned off. The receiver converts serial optical data into serial CML electrical data. An open collector compatible Loss of Signal is provided. The RX_LOS signal indicates insufficient optical power for reliable signal reception at the receiver. Digital diagnostics functions are available via a 2-wire serial interface, as specified in SFF-8472.
